Thai Nguyen University, Thai Nguyen, Vietnam
student484@ictu.edu.vn

***Abstract*—This thesis presents the development of an application named EasyNote using the Flutter framework. Tran Nam, a student from Thai Nguyen University, completed the project as part of their undergraduate thesis in 2023. The work covers theoretical foundations, application requirements, and design details, including use cases for note-taking and categorization functions. The author highlights the benefits of cross-platform development and the use of Flutter/Dart, as well as the practical skills gained during the project. The application successfully meets the requirements for a note-taking tool, providing a customizable and secure environment. The author notes that the project was completed to a high standard, with a user-friendly interface and compatibility with multiple platforms. The discussion focuses on the author's learning outcomes, including a deeper understanding of software development, cross-platform development, and the use of Flutter/Dart. The author also mentions the importance of version control and the need for further optimization of the code.**

***Index Terms*—Flutter, cross-platform, note-taking, application development, use cases, mobile**

I. Introduction

The thesis introduces the development of EasyNote, an application built on the Flutter platform. The author, Tran Nam, outlines the theoretical background of cross-platform development and Flutter, emphasizing the benefits of using this framework for software engineering projects. The project aims to provide a user-friendly and secure note-taking application that can be used across multiple platforms. The author highlights the importance of understanding the underlying technologies and the practical skills gained during the development process [1]. Published articles on the methods and subject of this project provide context for this English summary [2], [3].

II. Methods

The methods section details the use cases for note-taking and categorization functions. The author describes the development process, including the creation, modification, and deletion of notes and categories. The design focuses on user experience, with a user-friendly interface suitable for mobile devices. The application is built using Flutter and Dart, leveraging the framework's capabilities for cross-platform development. The author also mentions the use of Git for version control and the importance of optimizing the code for better performance and maintainability [1].

Supervisor: Đỗ Thị Loan, Thai Nguyen University of Information and Communication Technology (dtloan@ictu.edu.vn).

III. Results

The results show that the application successfully meets the requirements for a note-taking tool, providing a customizable and secure environment. The application allows users to create, modify, and delete notes and categories, with a user-friendly interface. The author notes that the project was completed to a high standard, with a user-friendly interface and compatibility with multiple platforms. However, the author also mentions that the project could benefit from further optimization, particularly in terms of performance and security [1].

IV. Discussion

The discussion highlights the author's learning outcomes, including a deeper understanding of software development, cross-platform development, and the use of Flutter/Dart. The author also mentions the importance of version control and the need for further optimization of the code. The author suggests that future improvements could include integrating server storage and data encryption to enhance the application's security features. The author also notes that the project could benefit from a more comprehensive testing process to ensure the application's reliability and robustness [1].

V. Conclusion

The conclusion summarizes the key findings, including the successful development of a cross-platform application with enhanced security features. The author suggests future improvements, such as integrating server storage and data encryption. The author also emphasizes the importance of continuous learning and improvement in software development. The project demonstrates the practical application of Flutter and Dart in building a user-friendly and secure note-taking application [1].
