

Building a management and evaluation system for clubs under the Student Union of the University of Information and Communication Technology.

Phan Trung Kiên

Abstract: The project addresses the problem of administrative management and competition evaluation for student clubs. The system allows for member management, activity attendance tracking, fund management, and the deployment of a chatbot to support answering questions about the Association's regulations. This tool helps digitize the reporting process and evaluate the performance of each club transparently and quickly through statistical charts.

Keywords: Club management, Student Union, Information system, Activity evaluation
