

NEUTRON NETWORK AND APPLICATIONS

nan

Abstract: The explosive and powerful development of technology has brought computers into every aspect of human life and labor. Along with this comes massive volumes of information data and knowledge, the management, comprehension, and classification of which pose a difficult problem that consumes much time and effort for managers and developers. This is especially true in the current era, when digital data has become common and has turned into the most widely exchanged type of information across all media and communication channels.

Keywords: NEURAL NETWORK, APPLICATION
