

DEVELOPING A PERSONAL INFORMATION MANAGEMENT APPLICATION ON WINDOWS PHONE 7

Nguyen Tuan Anh

Abstract: Today, human needs are increasing, so technology must also develop to meet those demands. From using computers to perform tasks, people also want to use their mobile phones to carry out certain work. Due to the advantages of mobile phones over computers—being much more compact, easy to use, and very popular—developing applications on mobile phones is a correct trend for the advancement of information technology.
