

ANALYSIS AND EVALUATION OF THE OPERATION OF SOME ROUTING PROTOCOLS IN MANET NETWORKS

nan

Abstract: In recent years, mobile wireless devices have been continuously developed and play an important role in human life, such as using wireless devices to exchange data at conferences or anywhere... Therefore, mobile wireless networks, especially mobile ad-hoc wireless networks, are increasingly developing strongly and have become an important research issue in the field of computer networks. Mobile ad-hoc network connectivity is implemented to provide operation and efficiency in wireless mobile communication by integrating routing functions into mobile nodes.

Keywords: EVALUATION OF THE PERFORMANCE OF SOME ROUTING PROTOCOLS, MANET NETWORK, MANET
