

Number lock

Tran An

Abstract: Today, with the applications of advanced science and technology, our world has been changing day by day, becoming more civilized and modern. The development of electronic technology has created a series of devices with outstanding features such as high precision, fast speed, compactness, and lightness—essential factors that contribute to the efficiency of human activities. Electronics is becoming a multidisciplinary science. It has met the essential needs of daily life. One of those needs is the issue of security.

Keywords: number lock
