

EXPLORING AND BUILDING AN ONLINE SEARCH SYSTEM

nan

Abstract: In today's era, information is an essential need for everyone in every field. Every minute, millions of websites are uploaded to enrich this endless resource. However, there exists a paradox: although the internet is likened to a global library, it still fails to satisfy people's information needs. There are many reasons for this issue, but the most important one is that the mutual understanding between humans and search engines has not yet reached a level where they can communicate effectively with each other.

Keywords: BUILDING AN ONLINE SEARCH SYSTEM
