

INTEGRATING DATA MINING WITH TRANSACTION MANAGEMENT SYSTEM AT LIMITED LIABILITY COMPANY TH

nan

Abstract: In recent years, the strong development of information technology has rapidly increased the ability of information systems to collect and store information. Additionally, the massive and swift computerization of production, business, and many other fields of activity has generated a huge amount of data that needs to be stored. Millions of databases have been used in production, business, management, and other activities, including many extremely large databases of Gigabyte or even Terabyte size.

Keywords: INTEGRATION OF DATA MINING, TRANSACTION MANAGEMENT SYSTEM AT TH COMPANY LIMITED, KHAI
