

BUILDING A GEOGRAPHIC INFORMATION SYSTEM TO SUPPORT DISEASE MANAGEMENT IN NORTHERN PROVINCES

nan

Abstract: In recent decades, GIS (Geographical Information Systems) technology has developed and been applied not only in the field of geography but also in many other areas of science and daily life, such as urbanization, commerce, infrastructure development, electronic maps, military operations, etc. In the simplest terms, GIS consists of layers of information about a location to enhance understanding of that location.

Keywords: GEOGRAPHIC INFORMATION SYSTEM SUPPORTING DISEASE MANAGEMENT IN NORTHERN PROVINCES
