

BUILDING A GEOGRAPHIC INFORMATION SYSTEM TO SUPPORT MINERAL MANAGEMENT IN THAI NGUYEN PROVINCE

nan

Abstract: Today, with the development of Information Technology, a foundation has been laid for the growth of the Geographic Information Systems field. GIS has become an information system for managing spatial data, capable of storing, analyzing, and describing data types. Geographic Information Systems are a powerful and reliable tool not only for scientists but also for managers. Mineral resources are an important national asset for socio-economic development, but as non-renewable resources, they need to be protected and used rationally.

Keywords: GEOGRAPHIC INFORMATION SYSTEM SUPPORTING MINERAL MANAGEMENT IN THAI NGUYEN PROVINCE
