

PERFORMANCE EVALUATION OF AODV AND OLSR PROTOCOLS ON NETWORK SIMULATOR 2 SOFTWARE

nan

Abstract: The term wireless network has become very familiar in recent years, and it must be affirmed that the role and development of wireless networks are increasingly widespread and popular due to their essential features and the capabilities they provide. Particularly attracting attention in wireless networks is the unstructured network type MANET (Mobile Adhoc NETwork). With its simple and efficient connectivity, it possesses many superior characteristics suitable for current development trends.

Keywords: PERFORMANCE OF AODV AND OLSR PROTOCOLS ON NETWORK SIMULATOR 2 SOFTWARE, AODV, OLSR
