

# **Build a tour booking website**

**Nguyen Van Huy**

**Abstract:** In the context of the rapid development of information technology and the increasing demand for travel, building a web-based tour booking system aims to meet the requirements of management and online service provision for customers. The objective of the project is to design and implement a user-friendly, easy-to-use interface system that integrates features such as search, price comparison, and automatic payment. The research methodology includes analyzing requirements based on surveys of the target audience and developing the web application using modern front-end and back-end techniques. The significance of the project lies in its ability to optimize the tour booking process, facilitate customers in selecting and purchasing travel services, and enhance the management efficiency of travel companies.

**Keywords:** Tour booking website, Information Technology, Tourism Management
