

Building a website connecting culture, food, and restaurants in Vietnam using Express.js and Vue.js

Truong Thi Minh Tam

Abstract: In the context of the growing development of information technology, building a specialized website system to connect culture, cuisine, and restaurants in Vietnam has become essential. This project aims to develop a web application using Express.js for the backend and Vue.js for the frontend. Through theoretical research and practical implementation, the project hopes to contribute a new yet suitable technical solution to meet local market demands, while also raising awareness of Vietnamese culinary culture through a digital platform.

Keywords: Connecting website, culinary culture, Express.js, Vue.js, website system
