

# **Use Reactjs, Django, Sqlite to build an online movie streaming system**

**Nguyen Duy Dat**

**Abstract:** In the context of the rapid development of information technology, this topic focuses on building an online movie streaming system using technical tools such as Reactjs for the user interface, Django as the application framework, and Sqlite as the database. The goal is to create an efficient solution for managing and distributing movie content easily and conveniently. The research methodology includes both surveys and experimental implementation to ensure the system's feasibility. The expected results of the topic not only benefit the online television industry but also contribute to knowledge about integrating modern technologies in web application development.

**Keywords:** Reactjs, Django, Sqlite, Online movie streaming system, Information technology
