

Build Custom Order Status For Woocommerce Plugin and develop Website on WordPress platform

Dang Hoai Nam

Abstract: This topic aims to meet the need for personalizing order status in the WooCommerce e-commerce system by building a custom order status plugin. At the same time, the topic also focuses on the process of developing a website on the WordPress platform, including designing a user-friendly interface and integrating effective content management features. The research method combines exploring theories about modern web technology and implementing application development based on the set requirements. The expected result is to provide a useful solution for developers and businesses, while contributing to the diversity of order management plugins in the WooCommerce ecosystem.

Keywords: Custom order status plugin, WordPress, e-commerce, website development, order management
