

Building a credit registration system for a university

Nguyen Phu Nam

Abstract: In the context of modern education management, the issue of credit registration is an important factor in improving the quality of teaching and learning at universities. This topic aims to build an automatic credit registration system for students, helping to optimize the management of academic records and degree information in modern education management. This study adopts a method combining theory and practice, analyzing the shortcomings of existing systems and incorporating the latest technologies to build a new registration management system, thereby improving the efficiency of teaching resource utilization and service quality. This project not only promotes educational reform but also provides students with a more convenient learning experience. The final research results will be deployed in a real environment to verify their effectiveness.
