

Tea Land AI Assistant: Research on Integrating Generative AI for Intelligent Question Answering Systems

Phung Dac Dung

Abstract: In the digital age, the deployment of intelligent question-answering (Q&A;) systems has become crucial across many fields. This topic focuses on the necessity of integrating generative artificial intelligence (AI) into Q&A; systems to improve accuracy and user experience. The objective of the research is to build an intelligent Q&A; system based on generative AI to handle complex questions with a high level of detail. The approach includes theoretical research and experimental implementation. The expected outcome is to provide a practical application solution and contribute to the future of the Q&A; field.
