

Build a basic health consultation AI chatbot based on standard medical guidelines.

Bui Xuan Hoach

Abstract: This topic aims to analyze and evaluate the necessity of applying AI Chatbot technology in the field of health consultation. The main objective is to build a chatbot system capable of providing basic medical information based on standard medical guidelines. The research methodology includes synthesizing and analyzing medical data sources, designing the chatbot's user interface, and deploying and testing the system. Through this process, the topic hopes to contribute to improving the quality of healthcare services through advanced technology.
