

Building an activity management system at a printing service facility.

Nguyen Thi Linh

Abstract: In the field of printing services, effective activity management is a key factor in improving productivity and product quality. This topic aims to address existing problems by building an activity management system at a printing service facility. Through theoretical research combined with experimental implementation, the topic aims to optimize work processes and enhance operational efficiency. The expected results will significantly contribute to improving management at printing facilities, helping businesses enhance their competitiveness.
