

Developing an automatic question generation module

Quang Duc Dat

Abstract: In the context of an increasingly developed education sector with the strong growth of information technology (IT), designing and implementing an automatic exam generation system has become an undeniable trend. This topic focuses on building an automatic exam generation module to support the teaching and learning process, meeting diverse educational content needs. The research method combines theory and experimentation to ensure the accuracy and effectiveness of the system. It is expected that this system will contribute to improving teaching quality and narrowing the gap between theory and practice in the educational environment.
