

Build a website for searching Vietnamese tourist destinations and cuisine integrated with an AI consultation chatbot.

Hoang Tuan Anh

Abstract: In the context of Vietnam's growing tourism industry, providing accurate information about tourist destinations and cuisine is an essential need. This topic focuses on building a search website integrated with an AI chatbot for consultation to offer a comprehensive solution for both travelers and service managers. Through theoretical research, the topic applies modern technologies such as web programming and artificial intelligence (AI) to construct an effective online information system. The expected results will contribute to the development of Vietnam's tourism and culinary industry.
