

Building financial accounting management software for Hieu Anh construction, trading, and technology company.

Pham Manh Hung

Abstract: In the context of increasingly complex financial accounting management, this topic focuses on designing and developing a software system to help Hieu Anh Construction, Trading, and Technology Company optimize its financial management processes. The project aims to build a software system that meets specific requirements for financial recording, analysis, and reporting. The research methodology combines theory with experimentation to ensure high system reliability. It is expected that the implementation of this system will help the company improve financial management efficiency and enhance competitiveness in the current construction market.
