

Building a personal and group finance management application

Nguyen Duy Quang

Abstract: In the context of an increasing number of people interested in effective financial management, this topic focuses on building an application to support both personal and group financial management. The objective of the work is to develop a system that helps individuals and groups organize expenses, create budgets, and track financial transactions easily and transparently. The research method combines theory with experimentation to ensure effectiveness and feasibility in practical application. The expected outcome of this work is to contribute to improving personal and group financial management, while providing a foundation for developers and organizations seeking to enhance their financial management systems.
