

Developing X-Tech online learning website

Luong Xuan Truong

Abstract: In the context of increasingly popular online education, this topic focuses on developing an X-Tech learning web system to provide an intuitive and highly interactive platform for online learning. The research objective is to build a website with features such as lecture management, group discussions, automated testing, and student feedback to effectively support the learning process. The research method is based on a combination of requirements analysis and experimental system design. It is expected that this topic will contribute to improving the quality of online education by creating an advanced technical solution.
