

Building a management and evaluation system for clubs under the Student Union of the University of Information and Communication Technology, Thai Nguyen University.

Phan Trung Kien

Abstract: This topic aims to research and build a system for managing and evaluating the activities of clubs under the Student Union of the University of Information and Communication Technology. The topic was chosen due to the necessity of improving the operational efficiency of clubs while enhancing the student experience. The objective of the topic is to develop an integrated system combining theoretical research and experimentation to manage and evaluate club activities. This system is expected to provide a comprehensive solution for monitoring, analyzing, and improving operations. The expected outcome of the topic will create a useful tool to optimize club performance and support more effective student management.
