

Smart Classroom Management

Thach Thi Bang

Abstract: In the context of education increasingly undergoing digital transformation, this topic focuses on the necessity of a smart classroom management system to improve teaching and learning effectiveness. The goal is to build an automated system that allows teachers to monitor student progress in real-time and provide tools to optimize the learning process. The research methodology includes collecting data from traditional classrooms, analyzing current trends, and implementing practical applications to test effectiveness. The expected results will provide useful solutions for teachers and students, while contributing to technological development in the field of education.
