

Building a library management website for Phuong Son High School

Vu Khanh Tinh

Abstract: This topic focuses on designing and implementing an online library management system to serve the needs of managing, searching, and using books at Phuong Son High School. By applying modern technologies, such as web programming and databases, the goal is to create a convenient and effective solution for maintaining and developing an electronic library. Through theoretical and experimental research, the topic hopes to provide a new management model for schools, while improving the quality of education through easy access to rich resources.

Keywords: Library management system, Online website, Educational information technology
