

Building a Website System to Support Learning and Practicing Foreign Language Communication Integrated with AI Virtual Assistant (AI Language Tutor)

Pham Thanh Trung

Abstract: In the context of the rapid development of information technology, this topic focuses on building a Website system that supports learning and practicing foreign language communication skills integrated with an AI virtual assistant. The goal is to provide a comprehensive solution for students and learners to improve their language abilities through online interactive activities. The research methodology includes analyzing current trends, designing a user-friendly interface, and conducting experimental implementation to evaluate effectiveness. This topic not only contributes to the field of digital education but also opens up potential applications in many other disciplines.

Keywords: Learning support website, AI virtual assistant, Foreign language communication, Digital education, Application evaluation
