

AI Agent website supports Lao students studying in Vietnam.

Kingvongsa Phoiphailin

Abstract: This topic aims to research and develop an AI Agent website to support Lao students studying in Vietnam, meeting the need for multimodal information exchange. The project's objective is to build a system capable of automatically providing consultation, delivering appropriate educational content, and supporting communication through language to reduce cultural and linguistic barriers. The research method combines theory with experimentation to evaluate the effectiveness of the AI Agent website. The expected results will contribute to improving the quality of education and learning experience for Lao students in Vietnam.
