***Abstract*—This thesis explores the application of Microsoft Office SharePoint Server 2007 in document management at the Thai Nguyen Provincial Post Office. The author describes the basic functionalities and services of SharePoint, including content management, collaboration tools, and integration with Microsoft Office. The study covers the setup and configuration of SharePoint on Windows Server 2003, as well as the development of a document management application. Despite the complexity of the task, the author successfully implemented the system, but acknowledges the need for further improvements. The system was able to improve the efficiency of document handling, but the author noted that there were still areas for enhancement, particularly in terms of user experience and system scalability.**

***Index Terms*—SharePoint, document management, Microsoft Office, content management, collaboration, information technology**

I. Introduction

The introduction highlights the importance of integrating information technology in various organizations, particularly in the context of document management. The author focuses on the implementation of Microsoft Office SharePoint Server 2007 to enhance the efficiency of document handling at the Thai Nguyen Provincial Post Office. The study aims to address the complexity and inefficiencies in the current document management processes by leveraging SharePoint's advanced features. The author acknowledges the challenges and limitations of the project, such as the need for further experience and expertise in SharePoint technology [1].

II. Methods

The author conducted a survey and analysis of the document management requirements at the Thai Nguyen Provincial Post Office. They configured and set up the SharePoint system on Windows Server 2003 and developed a document management application using SharePoint's features. The setup involved installing and configuring SharePoint, integrating it with existing systems, and developing custom functionalities to meet the specific needs of the post office. The author also conducted a thorough analysis of the current document management processes to identify areas for improvement and to ensure that the implemented system would meet the organization's requirements [1].

Supervisor: ICTU Teacher 128, Thai Nguyen University of Information and Communication Technology.

III. Results

The author successfully implemented a document management system using SharePoint, but noted that the task was complex and required further experience. The system was able to improve the efficiency of document handling, but the author acknowledged that there were still areas for enhancement, particularly in terms of user experience and system scalability. The implemented system allowed for better organization and retrieval of documents, as well as improved collaboration among staff members. However, the author noted that the system could benefit from additional features such as advanced search capabilities and more intuitive user interfaces [1].

IV. Discussion

The discussion focuses on the implementation of SharePoint in document management, highlighting the benefits of using SharePoint for content management, collaboration, and integration with Microsoft Office. The author also discusses the challenges faced during the implementation, such as the complexity of the task and the need for further experience. The author suggests that the system could be improved by incorporating more advanced features and by addressing user experience issues. The discussion also emphasizes the importance of continuous improvement and the need for ongoing support and maintenance to ensure the system's effectiveness [1].

V. Conclusion

The thesis concludes that the application of SharePoint in document management at the Thai Nguyen Provincial Post Office was successful, but the author suggests that there is still room for improvement. The author acknowledges the limitations of the project, such as the need for further experience and expertise in SharePoint technology, and emphasizes the importance of continuous improvement and ongoing support to ensure the system's effectiveness [1].
