

Developing a facial skin analysis and consultation system.

Nguyen Phu Khanh

Abstract: In the context of increasing interest in beauty and health, this topic focuses on developing a system for facial skin analysis and consultation. The objective of the research is to build a comprehensive solution that helps customers identify their skin condition and provide suitable care options. The research methodology includes both theoretical aspects of skin mechanisms and experimentation with AI algorithms in image analysis. The system is expected to be widely applicable in beauty centers and help customers optimize their skincare process.

Keywords: Facial skincare, consultation system, AI technology, skin management, beauty technology
