

Build a chatbot to support searching for information about cryptocurrency.

Ngo Viet Kien

Abstract: This topic focuses on building a chatbot system to provide detailed and continuously updated information about cryptocurrencies. In the current context, the development of blockchain technology has led to an increased demand for learning about and using cryptocurrencies, but the lack of reliable information sources poses a challenge for users. The objective of this topic is to create an effective chatbot to support cryptocurrency information retrieval by combining theoretical research with practical application deployment. Through this, the project not only provides a technical solution but also contributes to the sustainable development of the cryptocurrency market.

Keywords: chatbot, cryptocurrency, blockchain, information lookup, support system
