

Building a business website and designing sweaters using AI to simulate sweater patterns according to customer requirements.

Nguyen Thi An

Abstract: In the context of rapidly developing information technology, building a business website combined with the process of designing sweaters based on customer requirements by applying AI has become a trend. This topic aims to solve the problem of designing suitable sweater patterns and meeting users' personalization needs through the application of artificial intelligence (AI). Through a combination of theoretical research and experimentation, the topic will develop an AI system capable of analyzing customer requirements and simulating suitable sweater patterns. The expected outcome of this topic is to provide a solution for applying AI technology in the fashion field, contributing to enhancing the user experience of products and services.
