

Building an office task management system integrated with an AI Chatbot to support work.

To Huu Bien

Abstract: In the context of increasing automation and the application of artificial intelligence (AI) in office management, this topic focuses on building an office task management system integrated with an AI Chatbot. The main objective is to improve work efficiency by optimizing task processing workflows through automated communication with employees. The research methodology is based on a combination of theory and experimentation, including the design and deployment of the AI Chatbot system. The expected outcome is an efficient, flexible, and customizable system to support a variety of office tasks, contributing to the development of AI applications in office management.
