

Developing a smart personal finance management application that supports spending orientation and savings.

Tran Anh Duc

Abstract: In the context of increasingly complex economic life, personal financial management has become extremely important. This topic focuses on developing a smart personal financial management application to support users in effectively guiding their spending and saving. The objective is to build a data analysis system that provides advice based on users' actual spending behavior. The research methodology includes both theories of personal financial management and practical implementation of the application on a mobile platform. The topic is expected to make a practical contribution to raising awareness and financial management skills in the community, thereby creating positive changes in personal economic life.

Keywords: Financial management application, smart spending, automatic savings, data analysis, mobile
