

Developing an Electronic Library System for Hanoi National University of Education (HNUE) with integrated intelligent features.

Ha Van Hung

Abstract: In the digital era of education, building an electronic library (E-Library) system is an urgent requirement at Hanoi National University of Education (HNUE). This project aims to develop an E-Library system integrated with intelligent features to enhance the efficiency of document management and usage. The research method combines library management theory with experimental implementation of information technology applications. The project hopes to make a practical contribution to the digitalization of the library, thereby facilitating access, search, and management of academic documents, while improving the quality of education at HNUE.
