

Building an English center management system integrated with artificial intelligence to support assignment and evaluation of exercises.

Nguyen Quang Huy

Abstract: In the context of education increasingly focusing on quality, this topic aims to address the issue of effectiveness in managing and supporting English teaching at language centers. The objective is to build a management system integrated with artificial intelligence (AI) to automate the process of assigning exercises and assessments. The research method combines theory with experimentation to develop a practical application solution beneficial for teachers and students. The expected outcome is an efficient management system that helps improve the quality of teaching and learning English.

Keywords: artificial intelligence, foreign language center management, automatic evaluation
