

Developing a community health consultation and care system with integrated intelligent features.

Tran Quoc Khanh

Abstract: This topic focuses on developing a community health consultation and care system with intelligent features, aiming to meet the increasing demand for medical services in practice. The objective of the research is to build a system that supports doctors and residents in managing health conditions and providing appropriate advice based on personal data. The research methodology includes both theoretical analysis related to health information technology and the implementation of experimental applications. The expected outcome of this topic is to provide an effective technical solution that helps improve the quality of community healthcare services.

Keywords: Community health counseling and care system, smart features, health information technology, health status management
