

Building a website to manage the Eucharistic Youth Movement integrated with an AI chatbot.

Nguyen Duy Lap

Abstract: In the context of information technology development, building a website to manage the Eucharistic Youth Movement integrated with an AI-based chatbot holds significant importance. The project aims to research and implement a system to enhance the operational efficiency of the organization, meeting the need for quick and convenient information access for its members. The methodology combines organizational management theory with experimental development of an AI chatbot. The expected outcome is a comprehensive solution that optimizes management processes and serves the Eucharistic Youth Movement community.
