

Building a pet store management website integrated with an AI chatbot.

Nguyen Thanh Long

Abstract: In the current context, managing a pet store requires highly automated and personalized solutions. This topic focuses on building a pet store management website integrated with an AI-based chatbot. The goal is to improve customer experience through features such as product consultation, appointment scheduling, and automated support. The research method combines AI theory with practical application deployment. The expected result is an efficient system for business management while providing high-quality customer service.

Keywords: Pet store management website, chatbot, artificial intelligence, AI
