

Developing a smart online music streaming website

Ly Quoc Phuc

Abstract: In the rapidly evolving digital landscape, the need for an intelligent online music streaming system is increasingly growing to meet diverse user demands. This project aims to build and deploy a music website with the ability to recommend songs based on listening habits and personal preferences, as well as integrate advanced search features. The research process follows a combined theoretical and experimental approach, including competitor analysis, user interface design, and implementation of a song recommendation system. The expected outcome is an innovative digital solution that can enhance the user experience of online music streaming services, contributing to the development of the information technology industry.

Keywords: music website, recommendation system, user interface, advanced search
