

Building an electronic library application on a mobile platform

Le Duc Tam

Abstract: In the modern context, quick and convenient access to information via mobile devices has become extremely important. This topic focuses on building a digital library application to provide an effective solution for accessing data and research materials for readers. The goal is to develop a system for managing and sharing digital information, meeting the requirements of libraries in the digital era. The research methodology is based on a combination of theoretical and experimental approaches to design and deploy the application. The expected results will significantly contribute to improving the operational efficiency of the library system, thereby creating benefits for both providers and users.
