

Building a Website integrated with AI chatbot to support enrollment consultation for Hoa Mai Kindergarten, Ky Son ward, Phu Tho province.

Nguyen Minh Truong

Abstract: This topic aims to address the diverse and rapid information needs regarding the admission process of Hoa Mai Kindergarten. By integrating an AI chatbot into the website, the topic will build an online consultation system to enhance the experience for parents and children. The research method includes analyzing the current situation, designing, and deploying the system through machine learning programming techniques. The expected result is that the application of chatbot technology in the education sector will improve admission efficiency while enhancing the quality of consultation support services.

Keywords: Website, AI chatbot, preschool enrollment, school management, online support
