

Building a mobile application to support the management of the graduation project process for the Faculty of Information Technology - University of Information Technology & Communication.

Nguyen Danh Tuan

Abstract: In the context of the increasingly developing information technology (IT) education, managing the graduation project implementation process faces many difficulties. This topic aims to build a mobile application to support the management of the project implementation process for IT students. The research method is based on a combination of theory and experimentation, applying advanced mobile technology. The expected result is to improve the efficiency of managing the learning process and enhance students' self-study ability.
