

Building a course registration system and supporting learning management.

Mai Anh Van

Abstract: In the context of increasingly developed education, the issue of course registration and effective management of students' learning processes has become urgent. This topic aims to build a system to support the course registration and learning management process for students, lecturers, and educational institutions. Through theoretical research combined with experimental application deployment, the topic aims to provide solutions to optimize learning management and improve educational quality. The expected results will contribute to enhancing the student experience during the registration and learning process.
