

Developing a Training Management System for Apollo English Center with integrated smart features.

Nguyen Quoc Huy

Abstract: In the context of increasingly developed education and the urgent need for effective training management at English centers, this topic focuses on developing a specialized Learning Management System (LMS) for Apollo English Center. The objective of the research is to build and deploy an LMS system integrated with intelligent features, aiming to optimize the learning process and training content management. The approach includes analyzing real-world requirements, designing the system based on modern models, and implementing the application with continuous evaluation from Apollo English Center. The expected results of the topic not only demonstrate effectiveness in managing learning content but also contribute to improving the quality of training at the center.
