

Building a career counseling website integrated with an AI Chatbot

Le Minh Hieu

Abstract: In the context of the rapid development of information technology, career counseling increasingly demands more effective and modern solutions. This topic focuses on building a career counseling website integrated with an AI Chatbot, aiming to provide personalized support for students in choosing suitable majors and careers. Through theoretical research combined with experimental implementation, the topic expects to develop a robust Chatbot system capable of processing diverse information and providing advice based on artificial intelligence. This result not only helps improve the quality of career counseling services but also contributes to the application of AI technology in the field of education.
