

Build a mobile HR management application integrated with an AI chatbot.

Tran Quynh Anh

Abstract: In the modern context, effective human resource management is increasingly important for organizations. This topic focuses on building a mobile application system integrated with an AI chatbot to enhance employee productivity and experience. The goal is to solve the problem of automating human resource management processes through intuitive communication with a chatbot on smartphones. The research method is based on a combination of AI theory and practical application deployment. The expected result is a flexible, easy-to-use system that effectively supports human resource management and improves organizational work performance.

Keywords: Mobile application, Human resource management, AI chatbot, Process automation, User experience
