

Building a topic-based image sharing website integrated with an AI chatbot for intelligent search and SEO optimization.

Vũ Đình Bách

Abstract: In the context of the increasing demand for sharing and managing image content, building a specialized website for this purpose not only meets aesthetic requirements but also needs to ensure an optimal user experience. This topic focuses on designing and deploying a system integrated with an AI chatbot to provide intelligent search tools, while optimizing the search process through SEO. Through a combination of theoretical research and experimentation, the topic aims to contribute an innovative solution for managing and searching online images, serving not only individual users but also organizations that need to process large amounts of image data.

Keywords: image sharing website, AI chatbot, SEO optimization, image content management, smart search
