

Building a student internship management website integrated with AI for business recommendations

Nguyen Quoc Bao

Abstract: In the context of increasing demand for effective management of intern students, this topic aims to address this problem by building a web system integrated with artificial intelligence (AI) to automate and optimize the internship registration process. Combining theoretical research with practical application deployment, this project not only provides students with suitable internship opportunities but also supports businesses in finding potential human resources. The expected outcome of the topic is to develop a flexible technical solution that can be easily integrated into educational and technology organizations, while contributing to improving the quality of intern student management in the digital era.
